## Experience

---

### Product Analyst | [Swiggy](#)

Feb 2026 - Present

- Built *Experiment Evaluator*, an **AI agent** that automates A/B experiment evaluation end to end — running sanity checks, validating experiment data, computing statistical significance (Z-tests/Bayesian), flagging anomalies, and drafting readouts — cutting manual analytics effort by **~40%** and speeding decision turnaround for PMs.
- Built a unified **L-2 order-attribution table** instrumenting all L2 and L3 storefront pages, consolidating page-performance tracking that was previously siloed across teams into a single self-serve source of truth for storefront analysis.
- Evaluated **10+ experiments end to end** (ARDs, L1/2 analysis, significance testing) across features like EatRight and Gourmet revamp, supporting PM decisions to scale, iterate, or roll back.
- Ran deep **EDAs and RCAs** across Food and Menu journeys using SQL and Python/Pandas, owning funnel metrics (F2M, M2C, M2O) to surface drop-offs and opportunity areas tied to OPD and AOV impact.
- Built **claude artifact**- dashboard powered by Snowflake SQL pipelines, enabling PMs and leaders to track campaign and page performance across city and customer cohorts — reducing recurring analytics bandwidth.

### Business Analyst | [Matter Energy Pvt. Ltd.](#)

Jul 2024 – Dec 2025

- Analyzed **1M+ user interactions** across internal and external sources using SQL and Python/Pandas to surface drop-offs in the car-buying journey and optimize demand forecasting, delivering **ad-hoc analyses and stakeholder presentations** that improved conversion by **12%**.
- Built and maintained interactive Power BI dashboards and data products tracking engagement, conversion, and demand metrics, transforming data via SQL and Python to enable data-driven decisions and cut reporting time by **40%**.
- Led process-improvement initiatives by mapping current- and future-state workflows and owning end-to-end automation of sales-data collection, reporting, and QC checks in Python/SQL, driving efficiencies that cut insight-generation time by **25%**.
- Optimized data pipelines by refactoring heavy SQL joins and aggregations, reducing runtimes and improving data-availability SLAs for downstream reporting — improving reliability and scalability of recurring analytics outputs.

### Business Analyst Intern | Curaxo Healthcare LLP

Jan 2023 – Jun 2023

- Extracted and analyzed 5,000+ customer orders and 3 months of sales data using SQL and Excel to identify top-performing remedies and underperforming SKUs, driving catalog optimization that improved sales by 8%.
- Built automated Power BI dashboards to monitor daily orders, delivery timelines, and repeat customer behavior by consolidating data from multiple sources, cutting manual reporting time by 35%.
- Ran a customer behavior study combining survey data and website interaction logs (1,200+ responses) to pinpoint checkout drop-offs, communicating findings to stakeholders and contributing to a 10% increase in completed orders.

## Projects

---

### Personal Finance Tracker

- Built a personal finance tracker on India's Account Aggregator framework that pulls bank transactions via consent-based APIs and auto-categorizes every rupee into spend buckets.
- Designed the full data flow end to end — consent, encrypted data fetch, and a rules-plus-LLM engine that tags messy UPI narrations into clean categories.
- Made privacy the core: self-hosted, single-user, with 2-step verification and encryption-at-rest so financial data stays visible to no one but the owner.

## Education

---

### National Institute of Technology, Kurukshetra

Bachelor of Technology

2020-2024

8.12/10 CGPA

## Skills

---

**Technical skills:** SQL, Python, Statistics, Web scraping, Data Visualization, ML, Snowflake, Databricks

**Tools:** Claude Code, Power BI, Excel, PostgreSQL, Visual Studio Code, Jupyter Notebook
